

CORE SPIRE SYSTEMS

Information Technology & Security Systems

www.core-spire.com

**We provide you with an integrated system that ensures
a smart, advanced, and secure work environment.**

Core Spire Systems is a leading technology company, established to be a trusted partner in executing advanced technology projects for both governmental and private sectors.

We offer comprehensive solutions covering technology and IT systems, maintenance and repair of security systems, in addition to supplying and installing communication devices and advanced protection systems, as well as electrical and mechanical works, all carried out to the highest standards of quality and efficiency.

Ambition and Commitment: A Message from the CEO

The path of development does not wait, and those who don't keep up, fall behind. From this perspective, Core Spire Systems was born with a clear purpose: to lead change and provide solutions that elevate the Kingdom's technological infrastructure to new levels of efficiency and reliability.

Since day one, we've been committed to building an entity grounded in quality, professionalism, and innovation, believing that trust is built through performance excellence, and that true success is measured by the value we deliver to our clients and partners.

Our ambition is to actively contribute to achieving the goals of Saudi Vision 2030 by empowering organizations in their digital transformation, creating secure work environments, and delivering advanced technology solutions aligned with the highest international standards.

On behalf of the Board of Directors, I affirm our commitment to continuous development, investing in national talent, and delivering added value that makes a real difference.

Abdullah Al-Hajj Ali

CEO

Our Values and Principles

Our operations are guided by a firm set of values that form the solid foundation of everything we do, because we believe that success is not built on technology alone, but on the principles that drive it.

We start from the highest standards of quality : We start from the highest standards of quality, and rise from there to go beyond, to ensure our clients' satisfaction and exceed their expectations.

Innovation is not a choice, it's our foundation : We don't settle for what's available; we constantly seek what can be improved, developed, and turned into a true competitive advantage.

Transparency, because clarity builds trust : We act with honesty and clarity, both internally with our team and externally with our clients, because we know that trust is not granted, but earned.

Commitment to the national vision : We support Vision 2030, and recognize that every system we implement is a building block in the Kingdom's technological and security infrastructure.

Working with a team spirit : Every member of our team is a partner in achievement, as we work as one team driven by a shared goal.

Towards a Sustainable Future

Technological progress is not complete unless it is sustainable, serving people and preserving resources. From this standpoint, we integrate sustainability principles into everything we offer.

We also commit to applying best practices and recommendations in the field of energy efficiency, such as reducing waste, smart energy distribution, and adopting technologies that ensure long-term performance with the lowest possible environmental impact.

For us, sustainability is a goal and a vision, embodied in every project we implement and every decision we make.

Our Services and Solutions

We supply and implement integrated solutions that start from advanced technical foundations and end with full operational readiness.

We also possess deep expertise in system integration and maintenance, and in the professional installation of security, protection, and communication devices, to provide our clients with reliable and sustainable results.

Supply and Installation of IT Systems and Infrastructure

Providing the latest modern communication systems and network integration through innovative solutions that support scalability and full digital transformation.

IP network for telephone

IP network for internet

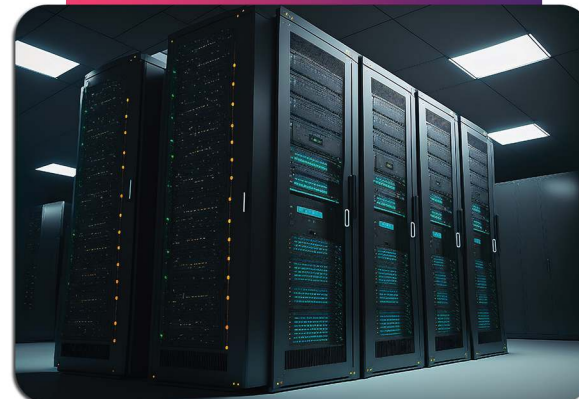

Video systems in meeting rooms

Design and implementation of computer networks

Server systems and data centers

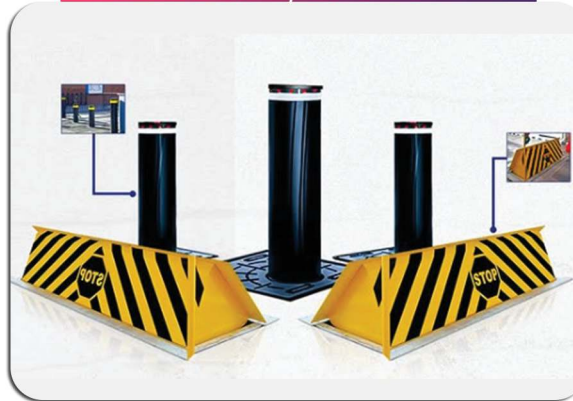

Supply and Installation of Security and Safety Systems

Providing the latest security protection systems, from surveillance cameras and access control systems to early warning systems, with professional installation and continuous support.

Access control systems

Supply and installation of security bollards

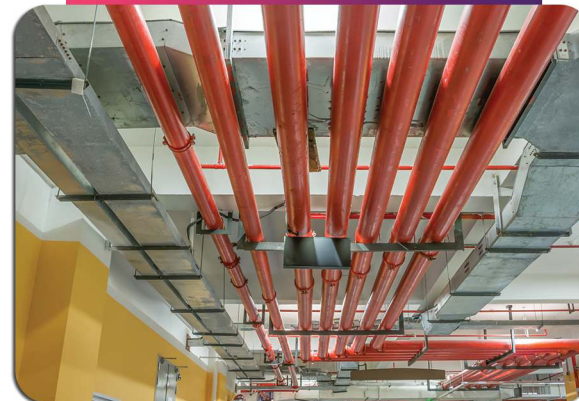

Surveillance camera systems

Intercom systems

Fire alarm systems

Managed Services **Technical Support and Maintenance**

We support business sectors with the necessary technical resources as needed, ensuring regular technical support and maintenance.

Management of IT sector and its accessories.

Training and qualifying clients on the use of various technical systems.

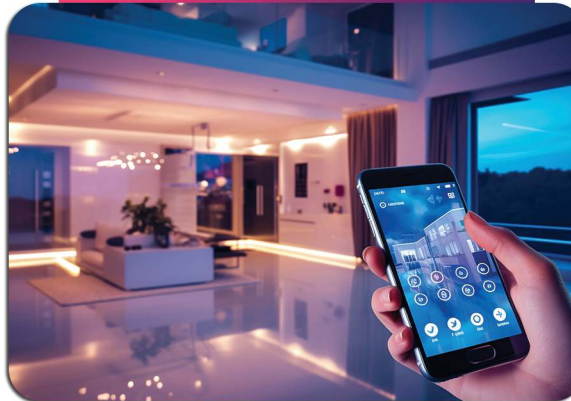

Smart Technology Solutions Compatible with Artificial Intelligence

Implementation and supply of integrated smart solutions for building and facility control using the latest AI technologies, aligned with global innovation trends and supporting energy efficiency and sustainability.

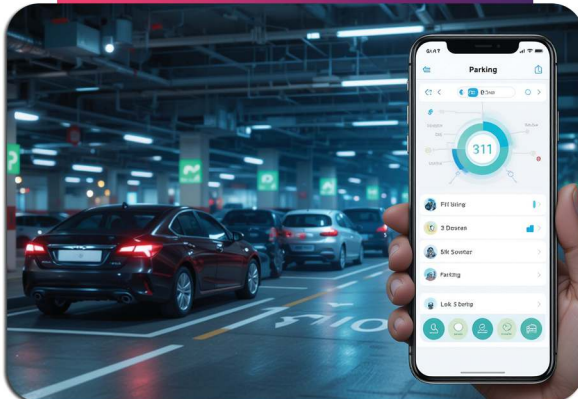

Intelligent Building Management Systems (IBMS)

Smart Home Systems

Smart Parking Management Systems

Smart Tracking Systems

Electrical and Mechanical Works

Implementation and supply of integrated electrical and mechanical solutions for buildings and facilities, compliant with technical requirements and safety standards.

Electrical Power Distribution Systems
(LV/MV Panels)

Uninterruptible Power
Supply (UPS)

Fire Fighting Systems

HVAC Systems

Our Project Execution Methodology

We rely on a flexible and precise methodology that enables us to find innovative technical solutions. From planning to final delivery and actual operation, we ensure that every stage is built on clear standards and well-studied decisions, to guarantee the continuous and smooth flow of performance.

1 The First Step: Understanding the Need

- We start each project with a full understanding of the work challenges and its technical and operational requirements.
- Data is analyzed accurately to establish a solid technical foundation and determine the most suitable solutions for the project.

2 Well-Planned: No Room for Improvisation

- We develop a clear implementation plan that includes the timeline, resource allocation, and necessary precautions.
- Our planning process takes into account best practices and international standards.

3 Flawless Execution: Quality Assurance

- Installation and implementation are carried out by trained specialized teams, with the highest level of coordination between disciplines.
- Each stage undergoes multiple tests before moving to the next, to ensure efficiency and safety.

4 Final Stage: Project Handover

- We deliver the project in full after passing all performance and quality tests.
- All technical and operational details are documented to ensure transparency and ease of maintenance and support.
